

Questions and Answers – Week 2 – E.H.Steffens aka esteffe1

Answer the following questions in your own words. This assignment will only be graded pass or fail.

- Explain the difference between the == operator and the === operator.

The operators == and === check if values are equal, While == only checks the values, the. === checks both value and type of the values.

- Explain what a closure is. (Note that JavaScript programs use closures very often.)

Closures are function declared within an existing function. Variables from the enclosing function are also available in the function declared in its enclosing function.

- Explain what higher order functions are.

High order functions takes a function as argument or returns a function.

- Explain what a query selector is and give an example line of JavaScript that uses a query selector.

An query selector looks for elements within a certain element that match the criteria of the selector.

An example is searching for a certain css element. Example a <div id = ..>.
